Agents & Automation plan

We are with you week by week until your agent is in production: first we connect it to your systems, then we test it and harden it, and finally we deploy it in your cloud with your team trained.

2 to 4 weeks
from start to finish

6 deliverables
that are yours at the end

20-min call
to start, with no sales commitment

AT THE END YOU HAVE RUNNING

1. **An agent in production**
   In your private cloud, doing real tasks of the process
2. **Connectors to your systems**
   ERP, CRM or APIs, with documented contracts
3. **A person approving what is critical**
   A supervision panel to review and audit
4. **Telemetry from day one**
   What the agent resolves and where it needs a person

A 2-TO-4-WEEK PLAN

The process and what you take away at each step

1 WEEK 1

Mapping and connectors

We define with you the rules of the process, the systems it touches and how the knowledge base is built from your documents.

✓ YOU TAKE AWAY

Flow map · MCP connector specification

2 WEEK 2

Agent in testing

We load your data, build the agent's tools and test it in a separate environment, without touching your operation.

✓ YOU TAKE AWAY

Agent in a test environment

3 WEEK 3

Guardrails

We test it with edge cases, tune the security filters and define with you which actions a person approves.

✓ YOU TAKE AWAY

Accuracy and security report

4 WEEK 4

Production

We deploy it in your private cloud, train your team and turn on telemetry to see what the agent resolves.

✓ YOU TAKE AWAY

Agent in production · Telemetry on

WEEK 1 | WEEK 2 | WEEK 3 | WEEK 4

2 to 4 weeks

This is what a 4-week agent looks like. A simple flow with a single system can take 2; the exact plan is set when we agree on it.

ILLUSTRATIVE EXAMPLE FLOW MAP

How an agent reconciles an invoice

The agent does the whole task on your systems and hands a person only what needs their judgment.

Resolved by the agent Decided by a person

Each stage

Is a real step of your process, with the system it touches.

Each mark

Says who resolves it: the agent or a person on your team.

The limit

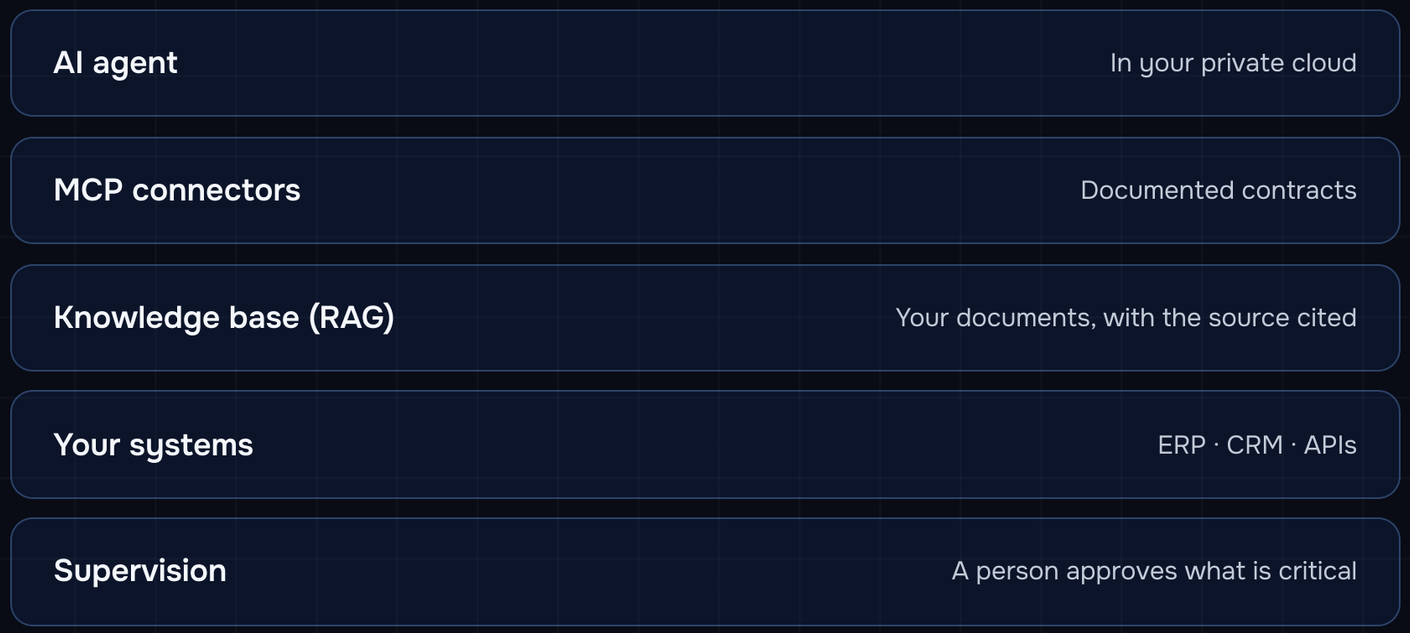

You set it: which amounts, clients or cases always go through a person.

A generic process to show the format. Your map comes from your real process.

ILLUSTRATIVE EXAMPLE MCP CONNECTORS AND GUARDRAILS

An agent connected to your systems, inside your cloud

The connectors use open protocols: if the AI model changes tomorrow, it is a configuration change.

SECURITY GUARDRAILS

- Filters against prompt injection.
- Masking of personal data.
- If your documents do not back it, it abstains.
- Every step of the agent is logged.

A reference architecture to show the format. Yours depends on your systems.

ILLUSTRATIVE EXAMPLE SUPERVISION PANEL

What the agent resolved and what waits for a person

Your team reviews, approves and audits every task from one place.

TASK	SYSTEM	RESOLVED BY	STATUS
Reconcile an invoice with the purchase order	ERP	Agent	Resolved
Update a customer’s status	CRM	Agent	Resolved
Answer a balance inquiry	ERP	Agent	Resolved
Difference above the approved limit	ERP	Person	To approve
Onboard a new supplier	ERP	Person	To approve
Question not backed by the documents	Knowledge base	Person	Escalated

Resolved

The agent finished the task in your system and logged every step.

To approve

The agent prepared everything; a person still has to authorize it.

Escalated

The agent had nothing to back an answer and passed it to your team.

Generic tasks to show the format. Yours come from your process.

AT THE END

Add more processes

With the first agent in production, you add flows and systems on the same connectors: with BluePixel in Digital Evolution (Service 04) or with your own team.

Everything stays in your cloud

The agent, the connectors and the data live in your private cloud, documented. If the AI model changes, it is a configuration change.

WHAT WE NEED FROM YOUR TEAM

- Access to the systems the agent will use.
- Someone who knows the process and validates the results.
- Defining with you which actions a person always approves.

How we start

Book a 20-minute call, with no sales commitment, with someone from the technical team. We review your process and tell you whether it is ready for an agent.
