Digital Consulting plan

Together we review your operation until you have four answers: where you lose time and money, how to build the solution, what comes first and what return to expect. If you decide to build, we stay with you.

2 to 4 weeks
from start to finish

4 deliverables
that are yours at the end

20-min call
to start, with no sales commitment

AT THE END YOU HAVE FOUR ANSWERS

1. **Where you lose time and money**
   Diagnosis with digital twins
2. **How to build the solution**
   Recommended architecture
3. **What comes first**
   Impact-ranked backlog
4. **What return to expect**
   Business case

A 2-TO-4-WEEK PLAN

The process and what you take away at each step

1 WEEKS 1 AND 2

Diagnosis with digital twins

We sit down with your leaders to understand the business and the operation, and review your code, your APIs and your data. We build digital twins of your users that walk through your critical flows and show where they get stuck and what it costs you.

✓ YOU TAKE AWAY

Friction map · Inventory of your systems · State of the technical debt

2 WEEK 3

Recommended architecture

We design the architecture that fits your operation, decoupled so that switching vendors or AI models is a configuration change. We calculate what it will cost you to run it in the cloud and in inference.

✓ YOU TAKE AWAY

Recommended technical architecture · Cost model

3 WEEK 4

Impact-ranked backlog

We rank what needs to be built by what it generates or saves. Your team knows what comes first and why, without endless feature lists.

✓ YOU TAKE AWAY

Backlog ranked by impact

4 WEEK 4

Business case

We build it with you and present it to your leadership or your board: what doing nothing costs you, the investment and the projected return, with numbers you can defend.

✓ YOU TAKE AWAY

Business case with projected ROI and cost of inaction

WEEKS 1 AND 2 | WEEK 3 | WEEK 4

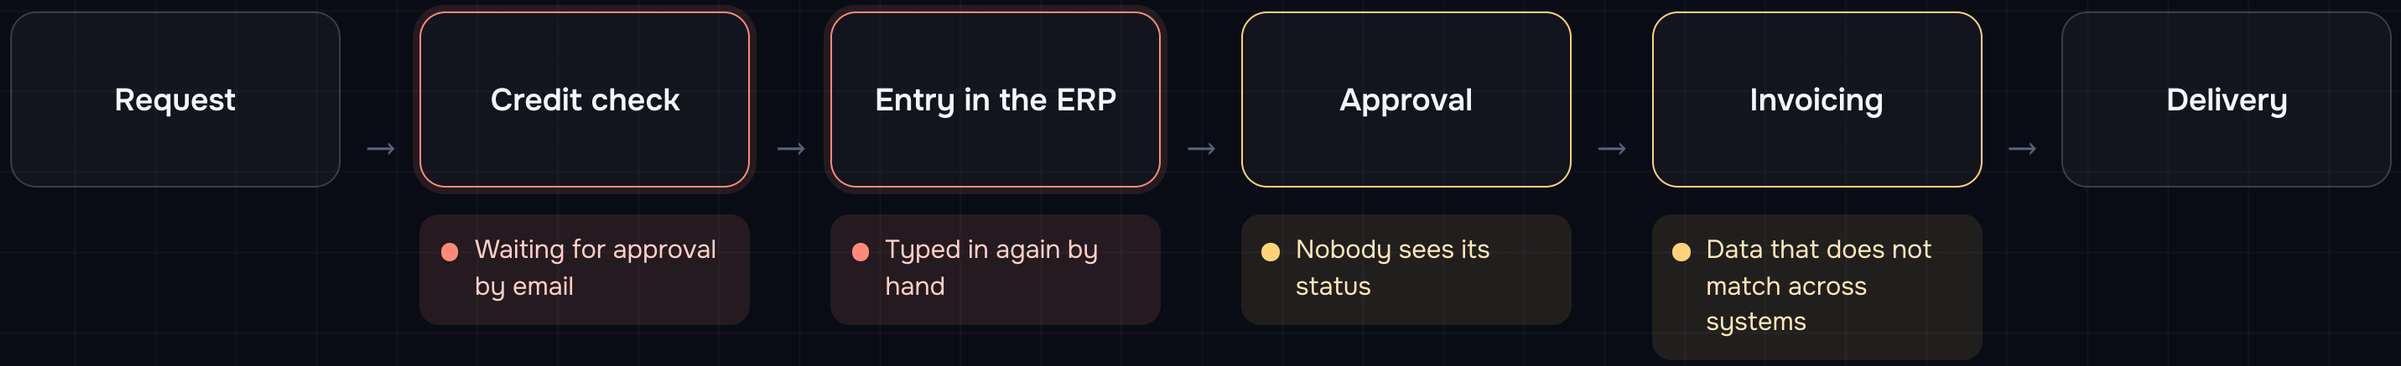

2 to 4 weeks

This is what a 4-week consulting engagement looks like. A smaller scope takes 2; the exact plan is set when we agree on it.

ILLUSTRATIVE EXAMPLE FRICTION MAP

Where an order gets stuck today

A digital twin walks through the process as a real user would and marks every point where time is lost or work is duplicated.

High friction Medium friction

Each stage

Is a real step of your process, walked through by a digital twin as a user would.

Each mark

Is a point where time is lost, work is duplicated or information gets lost.

The color

Shows how much it weighs on your operation and feeds the backlog order.

A generic process to show the format. Your map comes from your real operation.

ILLUSTRATIVE EXAMPLE RECOMMENDED ARCHITECTURE

A decoupled architecture and what it costs to run

Each layer can change without rebuilding the others: switching vendors or AI models is a configuration change.

Channels — Web · App · Portal

Services and API — Business rules

AI agents — Connected through MCP

Integrations — ERP · CRM · Banks

Data — In your private cloud

MONTHLY COST MODEL

Cloud and infrastructure

AI inference

Support and evolution

Calculated with your real volumes.

A reference architecture to show the format. Yours depends on your systems and your operation.

ILLUSTRATIVE EXAMPLE IMPACT-RANKED BACKLOG

What comes first and why

Each initiative is ranked by what it generates or saves against what it costs to do.

INITIATIVE	IMPACT	EFFORT	WHEN
Connect order entry to the ERP	●●●	●●○	First
Online approvals with traceability	●●●	●○○	First
Real-time order dashboard	●●○	●○○	Next
Agent that reconciles invoices	●●●	●●●	Next
Self-service portal for customers	●●○	●●●	Later
A single data model for reports	●○○	●●○	Later

First
High impact with low or medium effort: what pays back the investment soonest.

Next
High impact that takes more work, or improvements that build on what came first.

Later
What adds value but can wait without costing you money in the meantime.

Generic initiatives to show the format. Yours come from the diagnosis.

ILLUSTRATIVE EXAMPLE BUSINESS CASE

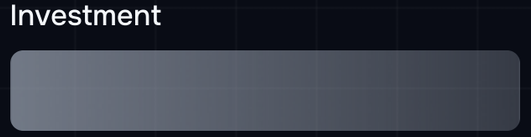

What doing nothing costs against what you invest

With numbers from your operation, to present to your leadership or your board.

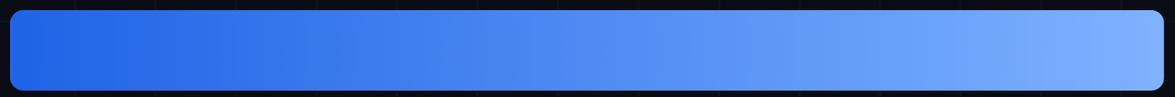

Cost of doing nothing (12 months)

Investment

Projected return (12 months)

Scenarios compared

1. Build now, with the projected return.
2. Build in phases, starting with the highest impact.
3. Do not build, if the return does not justify it.

Cost of inaction

What it costs you each month to stay as you are: hours, errors, sales that do not close.

Investment

What it costs to build and run the solution, by phase.

Projected return

What the solution generates or saves, with assumptions you review with us.

Illustrative bars: they show the format, not a client’s figures. Yours are calculated with you.

AT THE END

Build now

If the return justifies it, you start with the backlog ready: with BluePixel in Digital Platforms (Service 03) or with your own team. The deliverables are yours.

Build in phases

If it makes sense to go step by step, you start with what has the most impact and the rest waits its turn in the backlog. And if the diagnosis says building is not worth it, we tell you that too.

WHAT WE NEED FROM YOUR TEAM

- Time from your leaders to understand the business and the operation.
- Access to your code, your APIs and your data to review them.
- Your participation in building the business case presented to your leadership.

How we start

Book a 20-minute call, with no sales commitment, with someone from the technical team. We review your case and tell you whether this service fits.

Web	bluepixel.mx
WhatsApp	+52 55 4484 4212
Email	hello@bluepixel.mx

The four BluePixel services are hired separately: Digital Consulting ends with complete deliverables that do not tie you to hiring the development.
